

Are you looking for a film that is almost transparent and the image screened on it incredibly contrasting? In that case, our new BRIGHT Transparent film, which has already been tested by a number of prestigious clients, is waiting for you.

Front or Ultrashort Front

Novelty in our offer is unique for its ability to realistically display projected content even in low light conditions. However, it can also be used for ultra-short projection, where no image blur occurs at any point during the projection.
