

The transparent projection film CLEAR is an eye-catching holoprojection with a surprisingly excellent image result. The sheer CLEAR film offers high contrast and a wide viewing angle, although it remains transparent when not illuminated, allowing for continued viewing through the projection area after application.

Holographic effect

It is ideal for window applications and for interior shop windows (e.g. department stores). We have also prepared a number of successful realisations with this material in the field of exhibitions and art performances, where the use of special content can create eye-catching holographic effects.

SPECIFICATION

Type	rear holoprojection film
Colour	transparent
Material	projection film
Adhesive	yes
Diffuse Transmission	92%
Viewing Angle	120°
Thickness	100 microns
Peak Gain	7.9
Size	55" - 120" / Roll 1.524m x 30m
