

The DUST projection film for rear projection is a high-contrast film used primarily for projections in daylight and in high parasitic light. This unique film offers exceptional brightness and high-quality display of black and white on the projected image.

High Contrast

High contrast, true colour and use with up to 4K projection, that's the DUST film. These features make it suitable for use in low light conditions, when high quality projected content is required.

SPECIFICATION

Type	rear projection film
Colour	brown
Material	projection film
Adhesive	yes
Diffuse Transmission	60%
Viewing Angle	160°
Thickness	100 microns
Peak Gain	3.9
Size	55" - 120" / Roll 1.524m x 30m
