

This projection film for rear projection has gained its name thanks to the MILKY colour it has when it is not illuminated by the projector's light cone. It is intended primarily for design solutions in office buildings, where a great emphasis is put on a comprehensive colour design.

Design & Quality

If you need the ideal ratio of a design foil in simple lighting conditions (shopping centres, offices...), which will ensure e.g. intimacy during business meetings with the possibility of high-quality projection, the MILKY film is the right solution.

SPECIFICATION

Type	rear projection film
Colour	milky
Material	projection film
Adhesive	yes
Diffuse Transmission	88%
